3 high

4 high

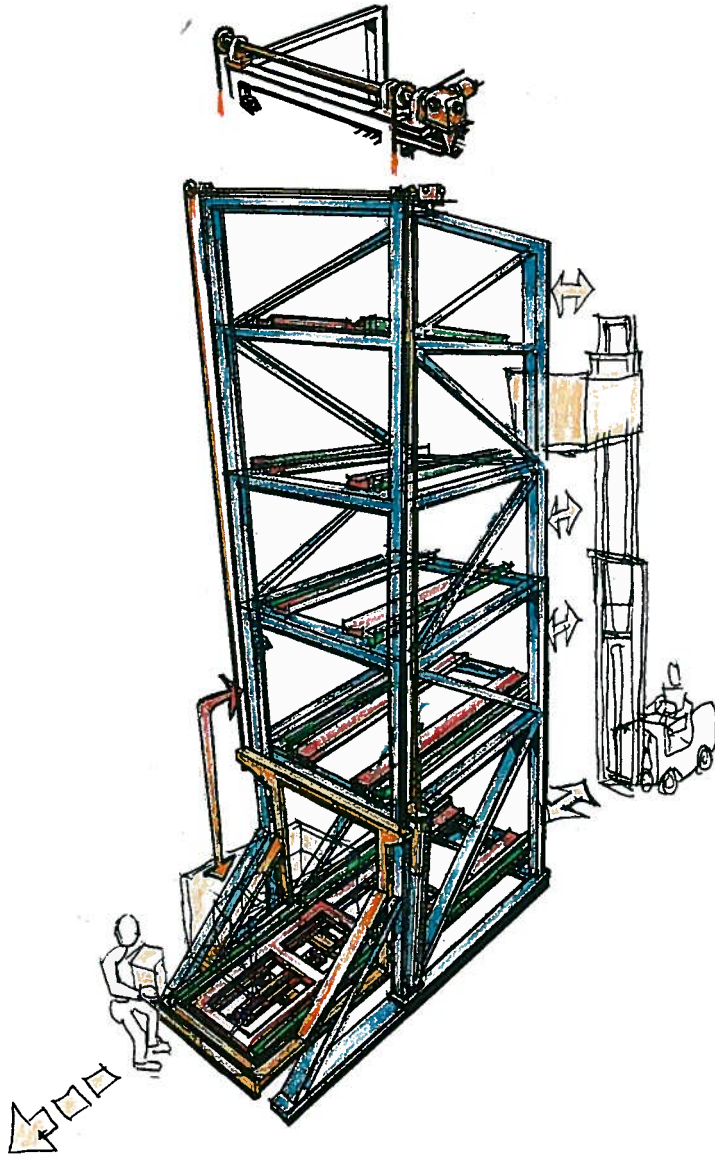

The Tower offers a unique, cost effective, random access linefeed solution for automatically displaying parts in a minimum of available space.

Utilizing SailRail technology and available air rights **The Tower** provides for efficient exchange of racks or containers in the most demanding automotive applications.

In standard two, three, or four high designs, the cost-efficient Tower enhances operational efficiencies by minimizing operator walk time and provides for dual cycle fork truck, material handling benefits.

The Tower

Features and Benefits

- Utilize air rights and conserve linefeed space
- Random access linefeed provided
- Part Sequencing (ILVS) capability
- Display the same part or different parts
- Interface with broadcast for advanced part delivery
- Robotic part handling interface
- Reduces direct labor walk time
- Ergonomic options available
- Handles returnable or expendable packaging
- Racks or containers
- Dual cycle fork truck operation
- Robust design and fabrication
- High weight capacity
- Standard design: 2 high, 3 high and 4 high
- Capital cost less than alternatives
- Cost efficient operation
- Flexible design to custom requirements
